				P	-partially ok

			Testers:	James		Jit	
Index	**Test**	**Description**	**Result**	**Comments**		**Result**	**Comments**
1	**Signup**						
1.1		signup link connects to create a new user page					
1.2		normal login process with accepted values works fine					
1.3		create new account button navigates to home page with correct values					
1.4		trying fields blank is rejected with a field specific helper message		rejected, no helper message			
1.5		trying to use an email already in use is rejected, with helper message		rejected, no helper message			
1.6		appropriately renders all information for different viewports					
1.7		additional comments, glitches, crashes discovered		Too lax on entry options, no password requirements, no email authenticator			
2	**Login**						
2.1		normal login process with accepted values works fine					
2.2		Login button navigates to home page with accepted values					
2.3		trying fields blank is rejected with a field specific helper message		rejected, no helper message			
2.4		entering incorrect fields are rejected with a helper message		rejected, no helper message			
2.5		appropriately renders all information for different viewports					
2.6		additional comments, glitches, crashes discovered		Forgot your password doesn't work			
3	**Navigation**						
3.1		Stream-lined title when selected navigates to the home page					
3.2		Each of the navigations option connects to the associated page name					
3.3		Form builder selection is not present for regular users					
3.4		appropriately renders all information for different viewports					
3.5		additional comments, glitches, crashes discovered		maybe added selection coloring so that we know what page we're on			
4	**Home**						
4.1		Renders all favourited forms by the user or a nice message when there is none		message could be better, maybe a picture			
4.2		links associated with favourites navigates to the correct form		doesn't render previously submitted forms straight away			
4.3		appropriately renders all information for different viewports					
4.4		additional comments, glitches, crashes discovered					
5	**FormBuilder**						
5.1		renders side panel with selectable component types					
5.2		trying to create a template with less than 1 element is rejected with a helper message					Form can be created without components
5.3		trying to create a template without a Form Name is rejected with a helper message					
5.4		trying to create a template without an assigned user is rejected with a helper message					
5.5		clicking a component option adds it to the page with an indicator of what it is					
5.6		remove buttons, remove the element					
5.7		editable fields in forms can be saved and also changed, eg. Short question					
5.8		Preview form button renders an example of what the form will look like					Preview do not show Long/Short QA each if both are selected
5.9		saved entries from editable fields are visable in preview	P	state delay issue, won't render on first preview attempt but second time it is there			
5.1		reset button, resets form builder, including name and assigned user	P	resets most but misses the form name			
5.11		creating the template makes that form available on the forms page for all users					
5.12		creating a template resets the form builder with appropriate message to indicate creation	P	resets, no message		P	
5.13		appropriately renders all information for different viewports		smaller table view has element overlap			Table not responsive on smaller screen size
5.14		additional comments, glitches, crashes discovered		Old information is present in the preview when rendering new templates			
6	**Forms**						
6.1		initial navigation renders table of available form templates					
6.2		selecting a template moves the menu to a sidebar					
6.3		selecting a template renders elements associated with creating a form; name of form, favourite tickbox, description etc					As well as table with previously submitted form
6.4		Edit and deleting buttons are not present for regular user					
6.5		trying to create a form without a description returns a helper message, doesn't allow creation					
6.6		with a description, create a form button renders the template that can be filled in		add delay message for form render delay			
6.7		with the template rendered for filling in, no other elements are present on the page apart from the navigation menus					
6.8		submitting the form will navigate back to the form creation view					
6.9		Previously submitted forms by the current user are rendered in a table below submission options					
6.1		clicking a previous submission navigates to a completed copy of the form in the actions page					
6.11		Favourites tickbox in both the main and creation views can add/remove selections available in the home menu					
		if already favourited the tickbox renders ticked					
6.12		delete button with give appropriate warning message and ask for confirmation before deleting					
6.13		delete button removes template, all forms made with template and any favourites of that template					
6.14		shows appropriate messaging when no templates are available		says no data, should say something like no templates available			
6.15		appropriately renders all information for different viewports		table is too large for mobile			Form information got sent through
6.16		additional comments, glitches, crashes discovered		selecting the form element again does not return to just navigation it keeps the form creation visable. No block on submitting forms that aren't filled out. Old information is present in the states when rendering new elements			On submission, if you repeatly click submit form before page refreshes, it will then generate alot of the same form at the table
7	**Actions**						
7.1		initial navigation renders a menu with actionable items assigned and tasked forms for the user					
7.2		if nothing is assigned renders table with indicator of nil values					
7.3		selecting an option renders non editable form with previously submitted answers					
7.4		cannot reassign without adding a comment, helper message displayed without one					
7.5		cannot reassign without adding a user to assign, helper message displayed without one					
7.6		re-assigning or closing the form returns to menu view					
7.7		all previously generated comments are rendered under the filled out form					
7.8		closing the form prevents adding new comments to form selections and removes from actions menu	P	is removed but the initial re-render has the previously stored state			
7.9		appropriately renders all information for different viewports					
7.1		additional comments, glitches, crashes discovered					If no data is found on creation of the form, clicking on the previously submitted form table will bring you to "Actions Page" and crashed(TypeError: Cannot read properties of undefined(reading '0'))
8	**Misc**						
8.1		favicon icon renders appropriately					
8.2		browser navigation works to your expectation		navigating backwards in the forms page from a selected form does not de-render the form emelents - need to update state		P	
8.3		navigating to the application with a valid token does not require a re-login					
8.4		naming convention is easy to understand	P	subjective, I understand it because I made it. Form building/creation/submission language is confusing		P	
8.5		easy to know what to do with the application		needs basic guide to directions for new users, add to home page		P
